

Made in Switzerland – Next generation GEO satellite communication

Emile de Rijk, CEO and founder
SWISSto12

18 June 2024
Swiss Telecommunications Summit

Communications Infrastructure in CH today

- Traditional land-based installations
- Communications by fibre/cable or “point to point” over the air
- State of the art infrastructure
- Dependency on foreign manufacturers
- No sovereign satellite capacity in Space

Global presence of SWISSto12

Headquartered in Switzerland with a global reach

- Founded in 2011, one of the world's fastest growing aerospace companies
- Manufacture Radio Frequency products and the world's first Geostationary SmallSat – **HummingSat**
- 35+ international patent families
- First growth stage company to sell full satellite system to satellite operators (Intelsat & Inmarsat/Viasat)
- 5,600m² Swiss headquarters and **production facility, with** locations in the **US** and staff based in **Denmark, Sweden** and **Spain**
- **Funded by leading European investors including Constantia New Business (CNB Capital), Swisscom Ventures, Swisscanto and Zürcher Kantonalbank (ZKB)**

HummingSat: a new category in Space

Traditional GEO comms large satellites are:

- Mass: 3,000 to 7,000 kg
- High mission cost: 100's m\$
- Build time: >5 years
- Dedicated launch strategy

Whereas...

HummingSat is:

- **~1000kg** mass
- **3-5x** cheaper
- **Shorter** build 2-3yrs
- **Rideshare** launch strategy
- **Advanced** payloads

Size Comparison:

HummingSat opens up new, lower cost, agile opportunities for GEO communications

Applications in Switzerland & beyond

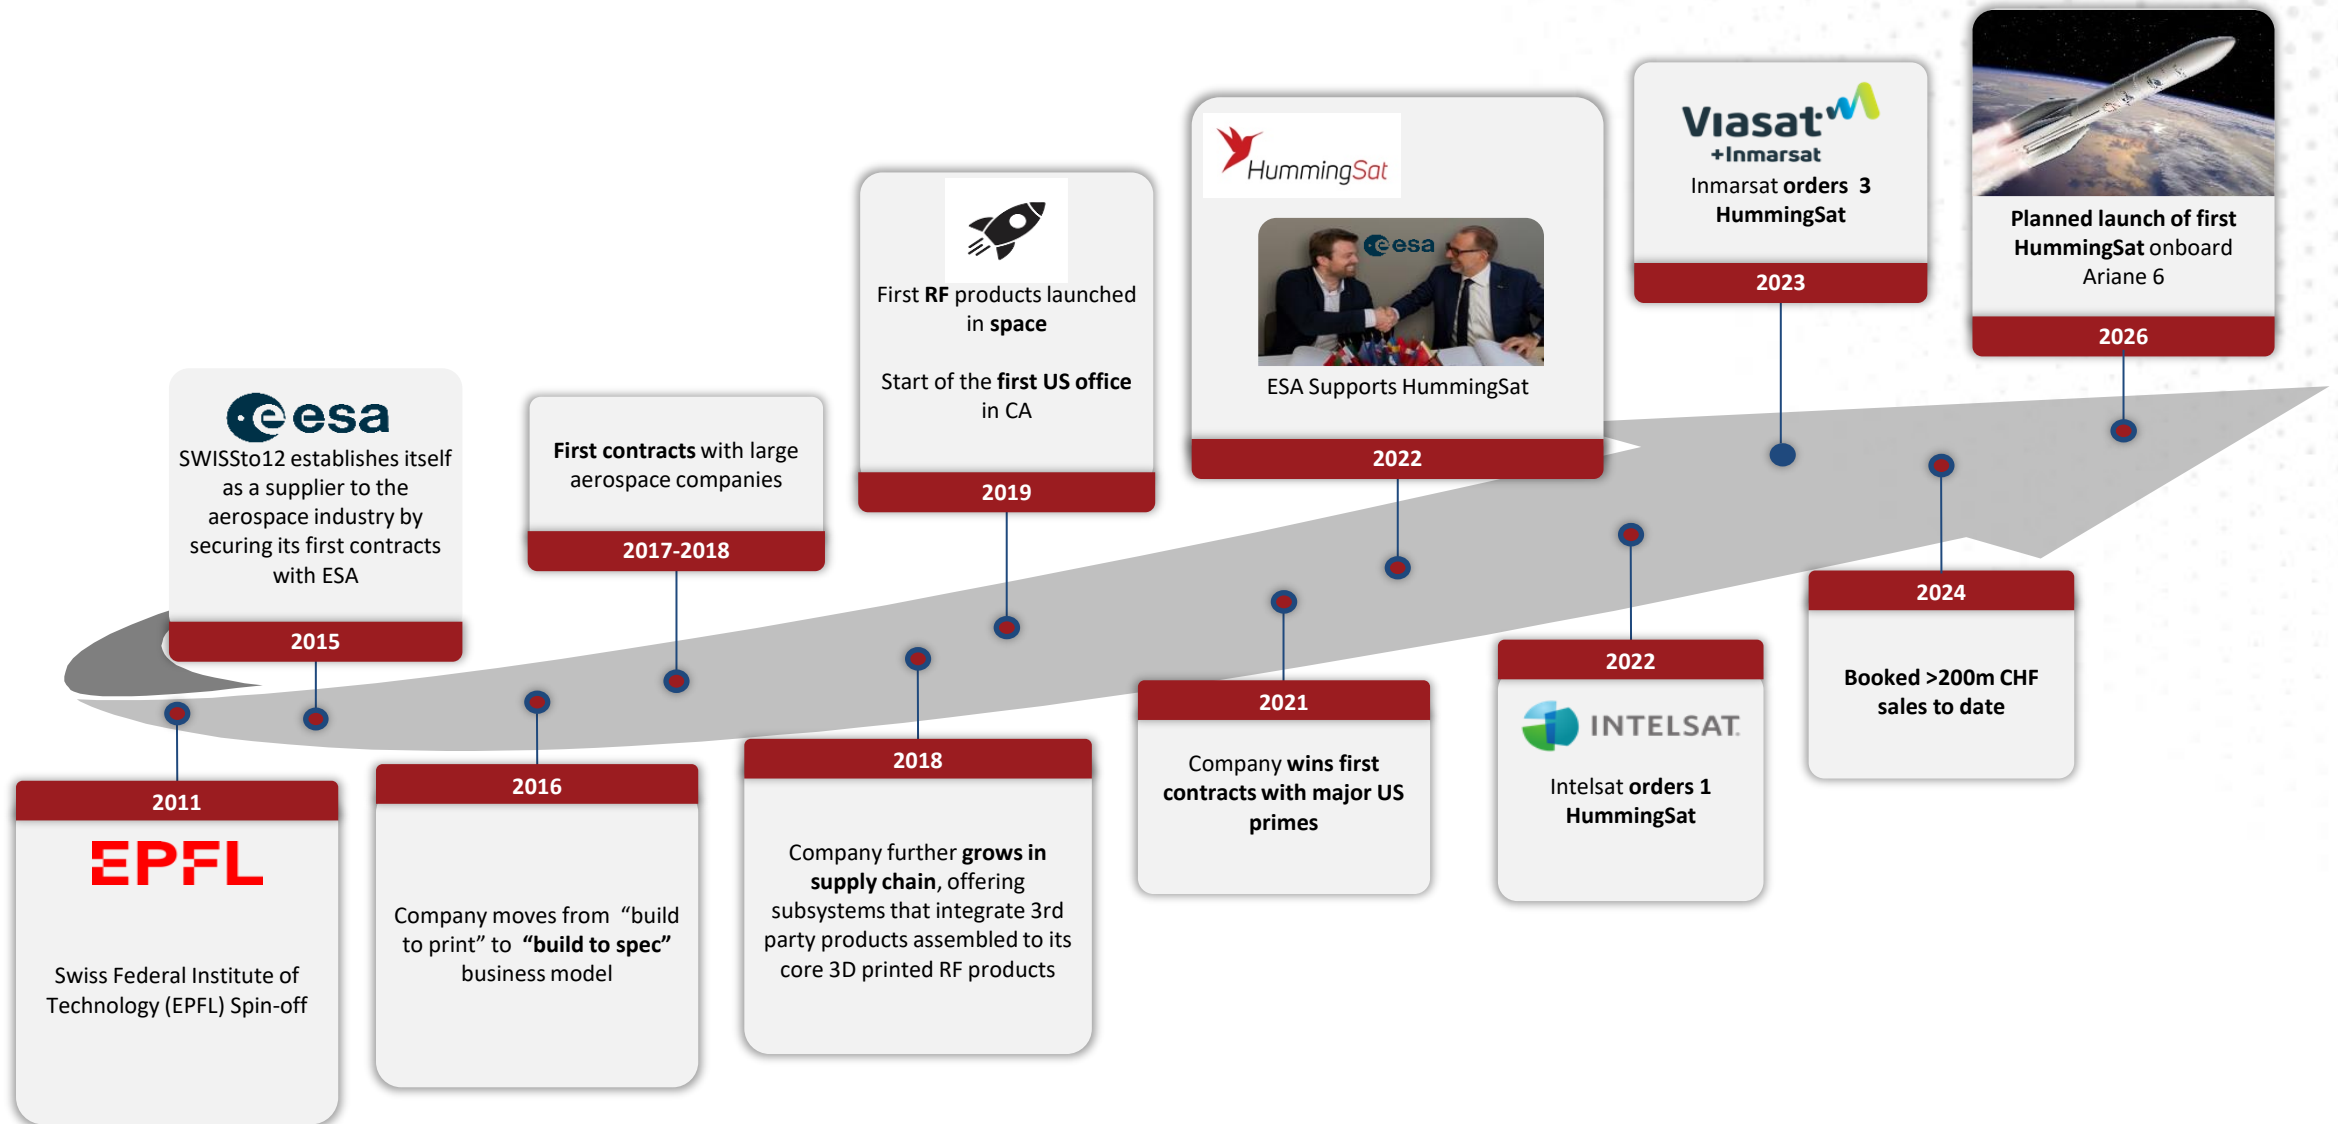

Connecting society / Secure sovereign comms / Cyber resilient

Connecting safety services

SWISSto12 history & milestones

Opportunities of Geostationary Orbit

From geostationary orbit, the satellite appears motionless in the sky to a user on the ground.

Each GEO satellite can cover 1/3 of the Earth

GEO = lowest cost satellite connectivity

Leading satellite telecommunications operators who predominantly use GEO

Key players in LEO

	Worst	Best	LEO	MEO	GEO

Products deployed on aircrafts and ships

HummingSat use cases

1. **Regional high-throughput satellites (HTS)**
2. **HTS targeted augmentation satellites**
3. **Broadband/fixed satellite service replacement satellites**
4. **Sovereign satellites for secure communications**

GLOBAL GEOSTATIONARY SATELLITE MARKET 2022-2031

(Euroconsult 2022)

HummingSat Key Capabilities

- Fits inside a **rideshare** volume (launch compatibility studied with Ariane 6, Falcon 9, MHI H3 & more to come)
- ~ **1000 kg** launch mass
- ~ **2 kW** of payload power end of life
- ~ **200kg** of payload capability
- **Orbit raise** GTO -> GEO capability built-in
- Up to **15 years** missions in GEO
- **HTS, BSS, FSS or advanced payloads** available

Partnership with esa

- SWISSto12 has signed a partnership contract with the European Space Agency (ESA) for the **development of the HummingSat Product line**
- The HummingSat Partnership Project is **currently supported by 9 ESA Participating States**
- **ESA has put in place a dedicated Partnership Project Team with all required expertise to support SWISSto12**
- Activities in the partnership program support a **reusable satellite architecture** for multiple future missions

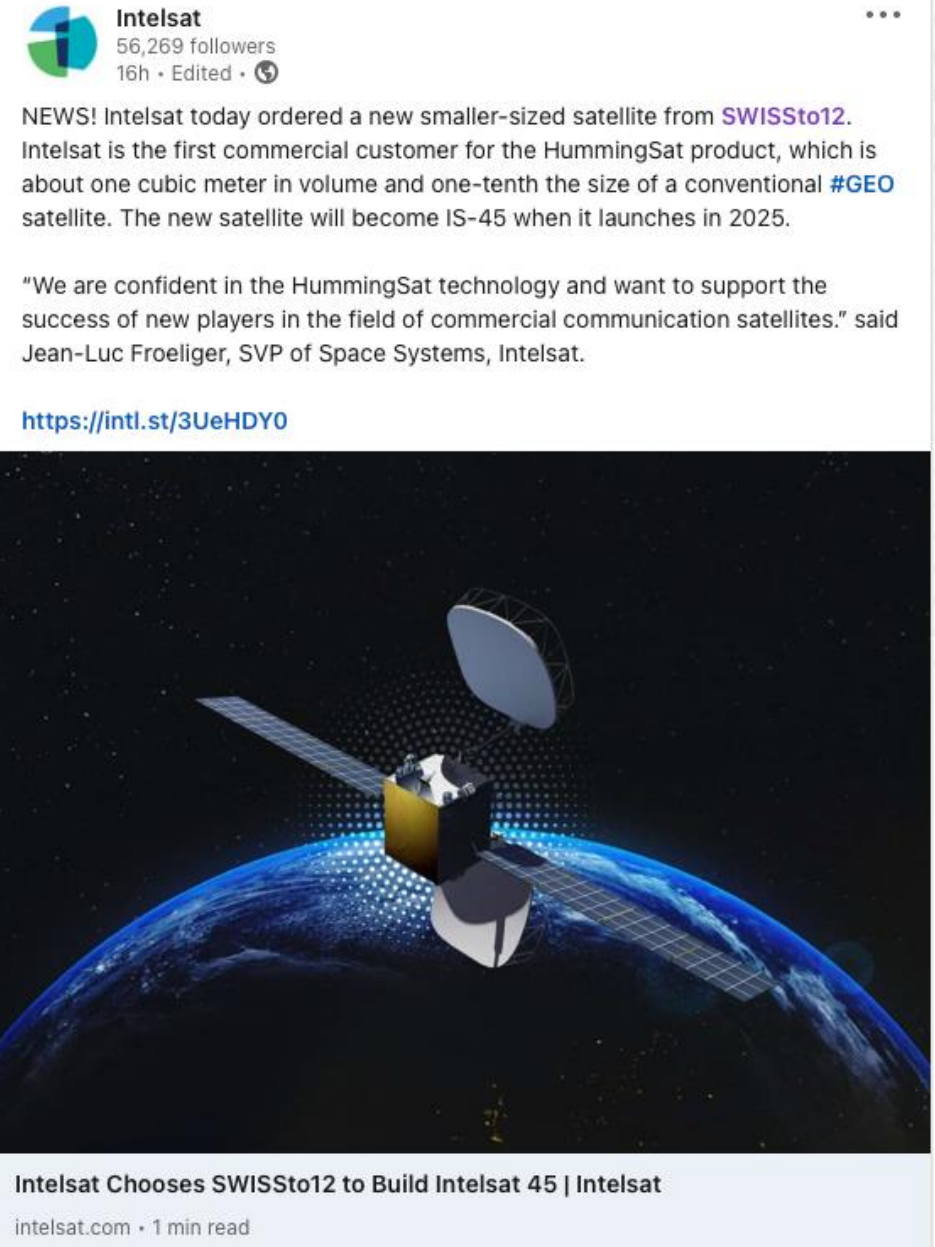

*Signature with Josef Aschbacher,
Director General of ESA*

Intelsat Chooses SWISSto12 to Build Intelsat 45

- **Intelsat** is the largest operator of the world's largest integrated satellite and terrestrial network
- **Unprecedented in the industry** for an established satellite operator to choose a growth stage company for a contract of this scale
- **Scheduled to launch in 2026 on Ariane 6**

The image is a screenshot of a social media post from Intelsat. At the top left is the Intelsat logo, a stylized 'i' in a circle. To its right, the text reads 'Intelsat', '56,269 followers', and '16h · Edited ·'. Below this is the main text of the post: 'NEWS! Intelsat today ordered a new smaller-sized satellite from SWISSto12. Intelsat is the first commercial customer for the HummingSat product, which is about one cubic meter in volume and one-tenth the size of a conventional #GEO satellite. The new satellite will become IS-45 when it launches in 2025.' Below the text is a quote: '“We are confident in the HummingSat technology and want to support the success of new players in the field of commercial communication satellites.” said Jean-Luc Froeliger, SVP of Space Systems, Intelsat.' Underneath the quote is a blue hyperlink: 'https://intl.st/3UeHDY0'. The main visual of the post is a 3D rendering of a satellite in orbit above the Earth. The satellite has a central body with a yellow section, two solar panel arrays, and a large parabolic dish antenna. The Earth is shown as a blue and white sphere with a grid of latitude and longitude lines. At the bottom of the post, there is a white banner with the text 'Intelsat Chooses SWISSto12 to Build Intelsat 45 | Intelsat' and 'intelsat.com · 1 min read'.

NEWS! Intelsat today ordered a new smaller-sized satellite from **SWISSto12**. Intelsat is the first commercial customer for the HummingSat product, which is about one cubic meter in volume and one-tenth the size of a conventional **#GEO** satellite. The new satellite will become IS-45 when it launches in 2025.

“We are confident in the HummingSat technology and want to support the success of new players in the field of commercial communication satellites.” said Jean-Luc Froeliger, SVP of Space Systems, Intelsat.

Inmarsat (Viasat) Chooses SWISSto12 to Build 3 Satellites: Inmarsat-8

- **Inmarsat** is a world leader in global, mobile satellite communications
- **On ground delivery of 3 satellites in 2026**
- To strengthen Inmarsat's radio-navigation safety services for **1.6 million mariners, 200 airlines, governments and space agencies**

Say hello to our next-generation Inmarsat-8 satellites, which will launch into geostationary orbit by 2026 to secure the future of our critical ELERA L-band safety services and enable advanced emergency tracking:

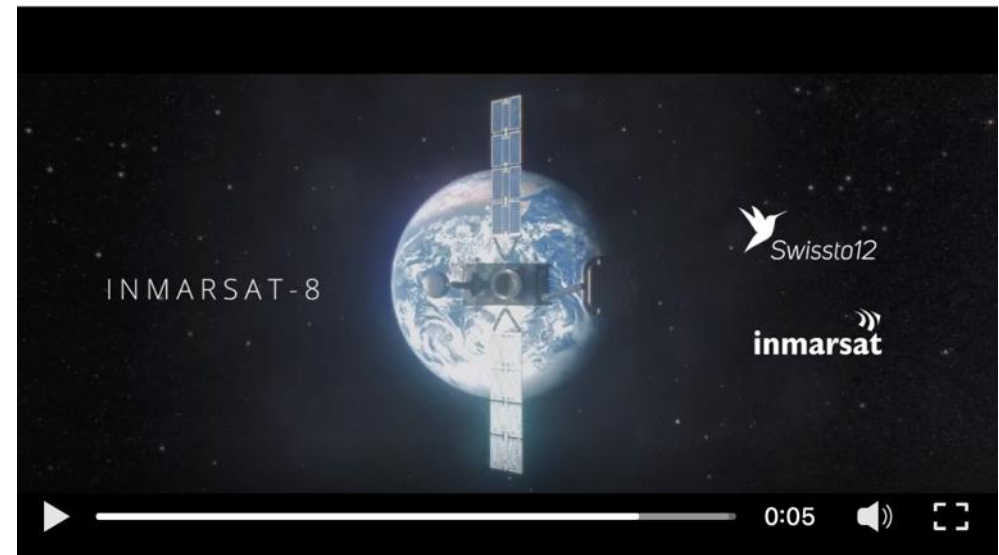

🇪🇺 Three I-8 satellites will be developed and manufactured by Europe's fastest growing aerospace provider [SWISSto12](#)

🇪🇺 Each I-8 will be just 1.5 cubic metres in volume - that's up to 5X smaller than conventional GEO satellites

🇪🇺 Radio navigation transponders will enable global Satellite-Based Augmentation System (SBAS) services for precision tracking to as little as 10 cm.

Switzerland in Space: Yes we can!

- Switzerland's space ecosystem is large, diverse and growing fast
- Revenues from suppliers to the space industry in CH > 400M CHF/year
- Switzerland has competencies and industry to deliver satellite missions domestically
- Switzerland must develop more ambitions to lead space programs and develop downstream business cases

Thank you.
