

Stride Towards Digitalization, Transforming the Ways We Move

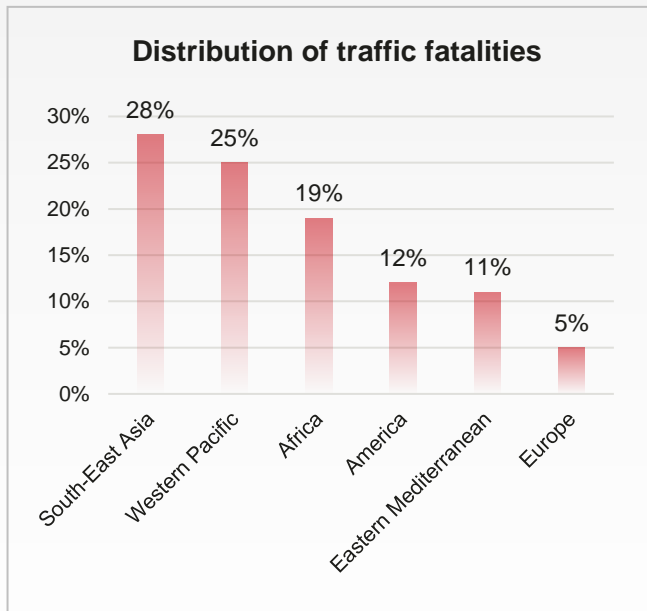

Rachad NASSAR, Ph.D.
Global Accounts Director, Smart Transportation BU

Transportation challenges

More traffic deaths & injuries

Annual traffic deaths: 1.19 million
Annual traffic injuries: 20~50 million

WHO: Global Status Report on Road Safety 2023

Serious congestion

- **55% of global cities** have slow commutes during rush hours.
- Time in rush hour per year is 244~273 hours.
- The top 3 most congested city are **Paris, Saint Petersburg and London.**

Rank	City	Avg TCI Ⓞ	Max TCI Ⓞ
1	Paris	45.53	82.04
2	Saint Petersburg	40.09	88.49
3	London	38.95	70.83
4	Mexico City	37.24	80.07
5	Moscow	36.37	94.18
6	Lahore	35.57	67.47

World Urban Development Report 2022

Economic loss & Pollution

- Congestion is already costing Asian economies: **2~5% of GDP a year.**
- Transport emissions: grew at an annual average rate of **1.7%** from 1990 to 2022.

C40 Cities & IEA

ITS: aim to achieve safe and efficient operation of road network

ITS Approaches

Safety

Efficiency

Experience

Sustainable

① Order Control

- Traffic violation management
- Traffic incident management
- Traffic signal control

Basic ICT infrastructure-based
(Device-Driven)

② Traffic optimization

- Traffic indicator system
- Congestion analysis
- Traffic distribution decision
- Safety analysis
- Safety governance
- Emergency dispatching
- Intelligent signal

Platform & Data-based
(Data/AI-Driven)

③ Comprehensive Transportation Services

- Integrated traffic and transport management (Sea/Land/Air/Rail)
- Public Transport Services
- Transportation Hub Services
- Cargo & People Transportation Services

Collaboration-based
(TOCC: Transport Operations
Coordination Center)

ITS Journey in China

The journey of vehicle quantity from **10 million to 200 million**, China only took **23 years**.
Rely on ITS to enhance traffic management, reduced traffic accidents and deaths extremely.

Data Source: China Road Traffic Safety Forum

Technical Architecture Overview

Technical approaches

Evolvable architecture

- Supporting increasing applications
- Open architecture

Traffic know-how platform

- Scenarios-oriented analysis
- Decision-making support

Cost-effective & ubiquitous network

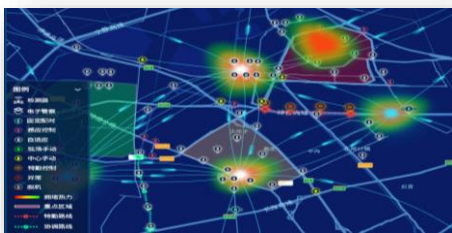

- Mixed with IP/Optical/Wireless
- Live-network reusing

High-precise sensing

- higher accuracy
- more types of incident perception
- Local-adapted algorithm
- Live-equipment reusing

Situation Awareness: 3 cognitions improved, identify key factors of congestion easier, and provide decision-support for traffic police

Cognition of road network

- **Causes analysis:** occasionally or frequently? Over road capacity or other controllable reasons?
- **Road network:** mismatch between upstream and downstream traffic, mismatch between entrance and exit, etc.
- **Management:** mismatch between signal control and traffic flow, or between lane configuration and travel requirements, etc.

Cognition of travel patterns

- **Full statistics:** travel vehicles by day, by time period, local & outside vehicles, etc.
- **Travel characteristics:** frequently travel vehicles, OD analysis
- **Key target identification:** mileage & areas of different types of vehicles

Cognition of traffic patterns

- **Traffic analysis:** traffic flow composition, key route identification, OD analysis
- **Correlation analysis:** how vehicle affects road conditions, correlation between active vehicles and congestion levels

Figure out TOP congested roads, identify key causes

Mismatch of upstream and downstream traffic flow: 1,448 PCU/h vs 731 PCU/h

Precise traffic guidance

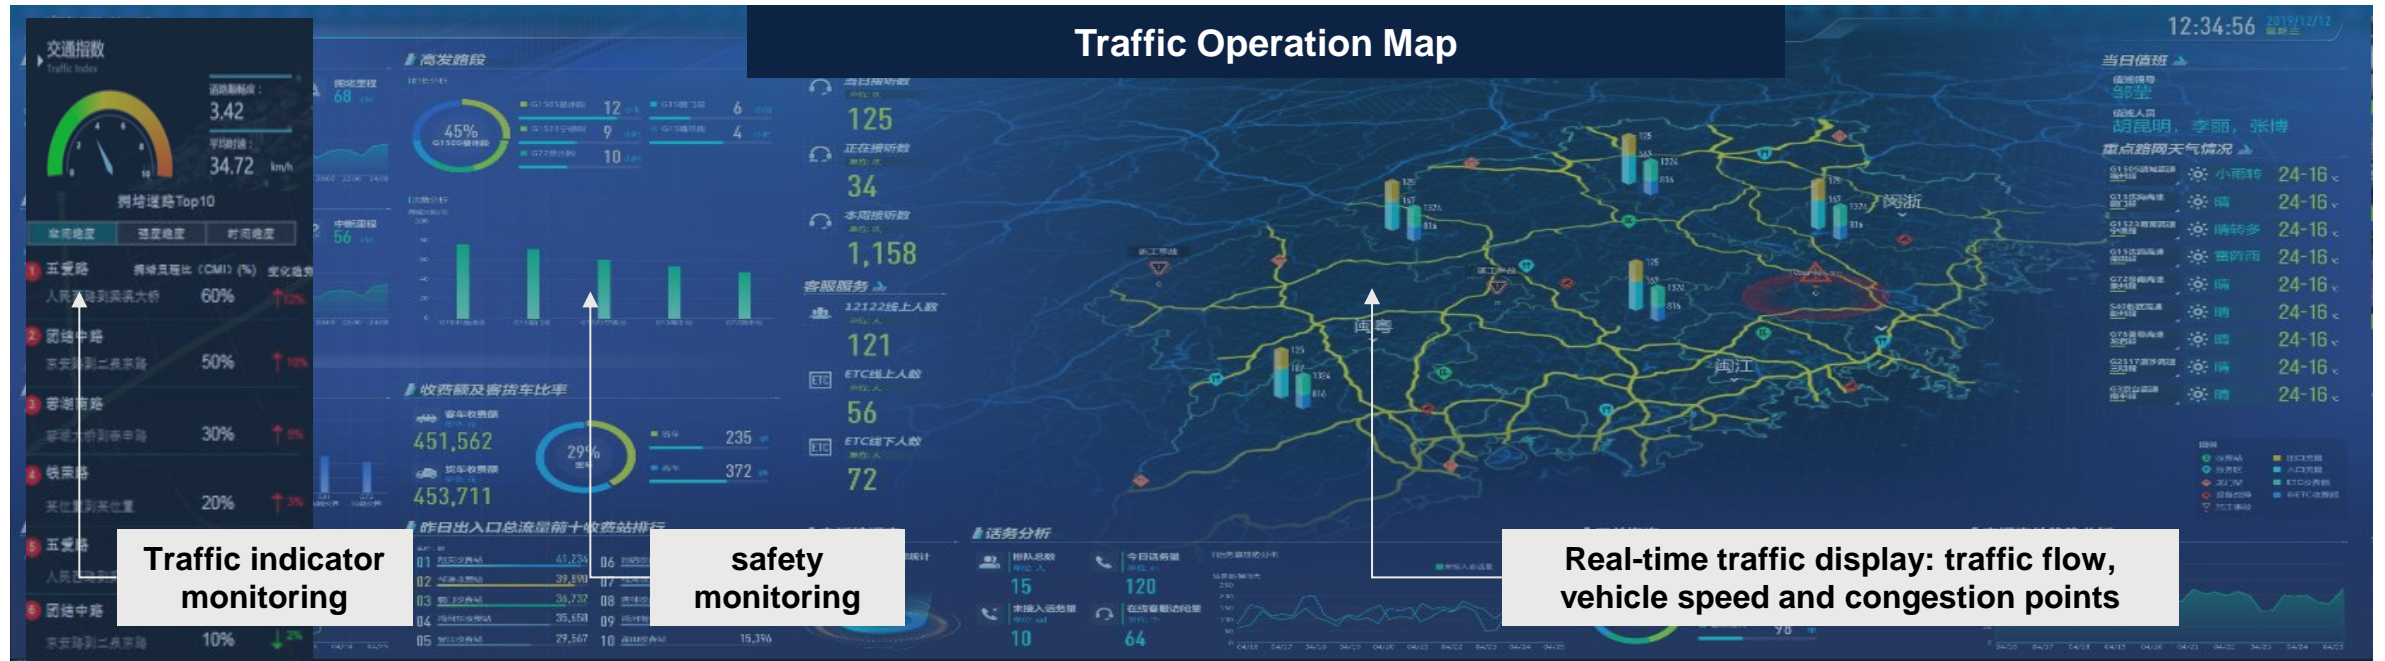

Public APP

Holiday travel guidance

As usual data, 46,000 vehicles will travel outside on holiday from one road.
APP send off-peak suggestions in advance, and 14,000 vehicles follow the suggestions of traffic police.

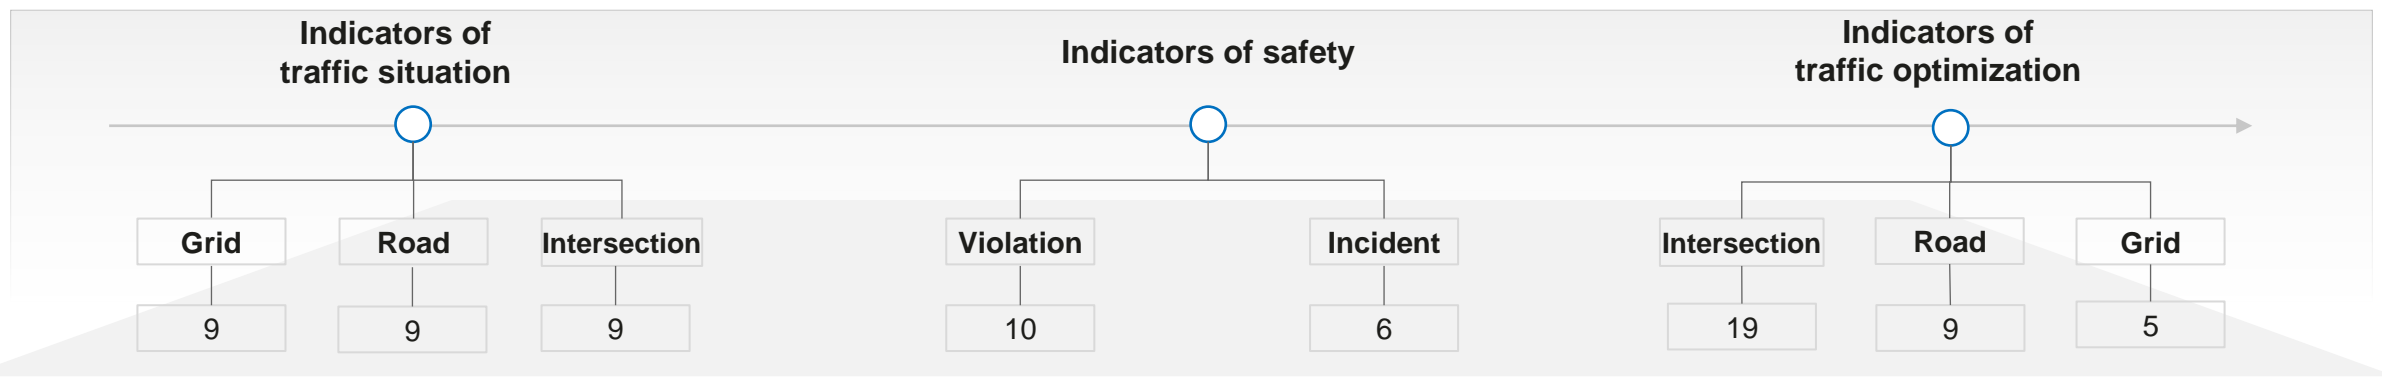

A completed traffic evaluation indicators to support closed-loop governance

Traffic indicator monitoring

safety monitoring

Real-time traffic display: traffic flow, vehicle speed and congestion points

Intelligent Signal Control: multi-vendor interconnection and green wave

Capability

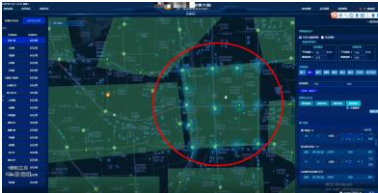

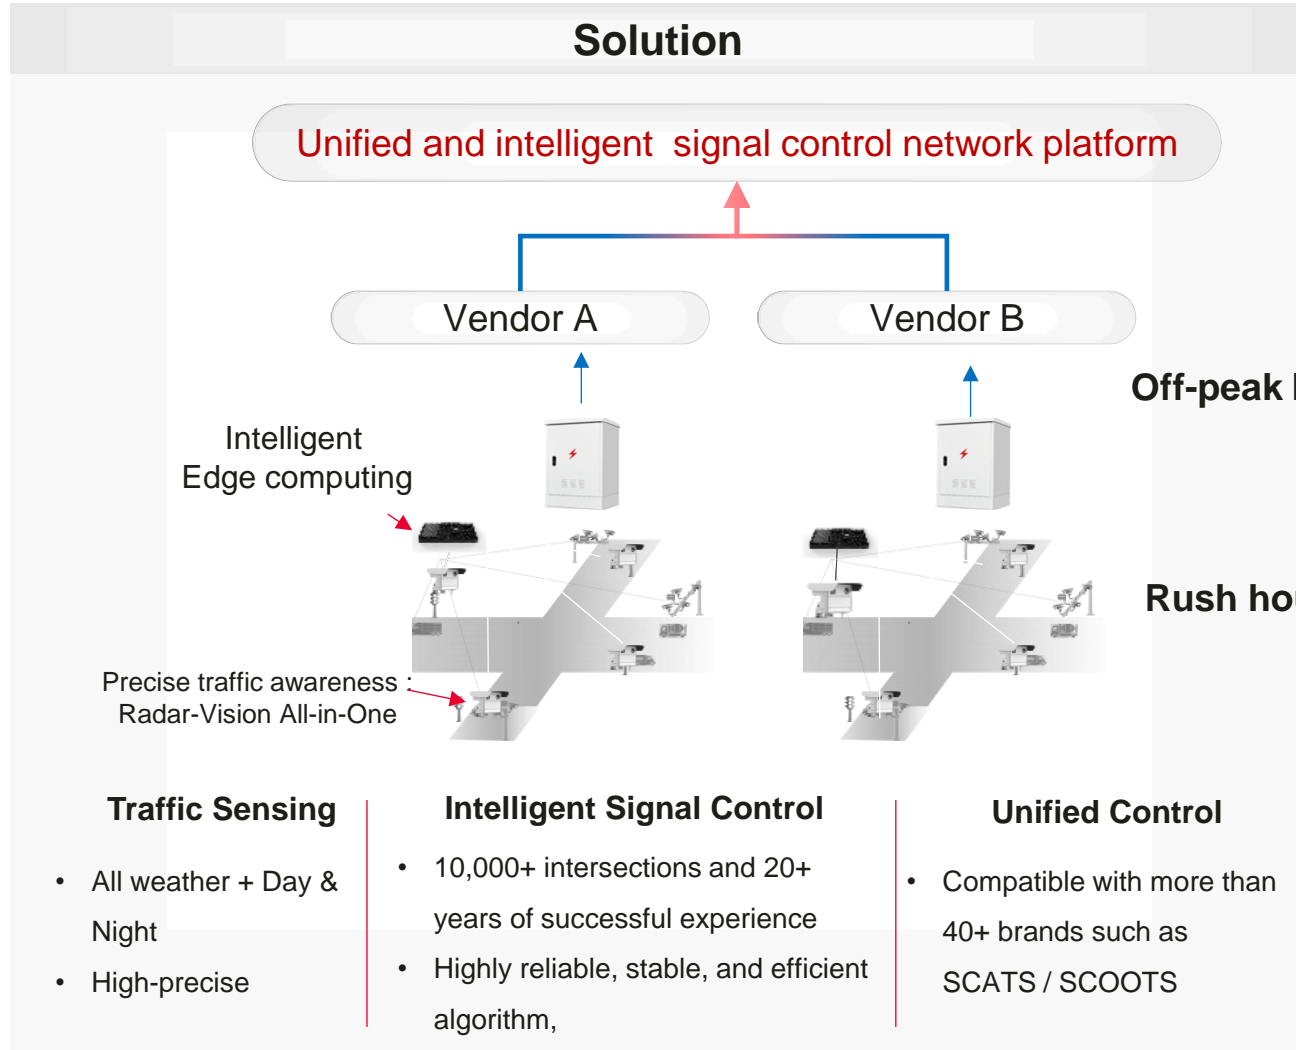

Single Intersection Intelligent Signal Control

Dynamic Green Wave

Sub-Area Coordination

Benefits

↓ **30%**

Travel Time

↓ **40%**

Number of stops

↑ **25%**

Average speed

Huawei has served Roads transportation industry more than 20 years

Huawei has served around Asia, Africa, Latin-America, Europe and Middle-east regions, which aim to achieve “Easy Driving, Smooth Mobility, Convenient Logistics with cutting-edge technologies”.

Thank you.

把数字世界带入每个人、每个家庭、
每个组织，构建万物互联的智能世界。

Bring digital to every person, home and
organization for a fully connected,
intelligent world.
